

FUNCTIONAL REQUIREMENT DOCUMENT - IT PRODUCT SALES DASHBOARD

1. Functional Overview

The Sales Dashboard system will provide an interactive interface for users to analyze sales performance of IT products such as laptops, modems, and processing chips. It will process sales data from backend systems and present key business metrics in a structured visual format.

2. Functional Requirements

2.1 Sales Metrics Display

- The system shall display total sales quantity for each product.
- The system shall calculate and display total revenue based on sales transactions.
- The system shall calculate and display total profit using revenue and cost data.
- The system shall display total return quantity and return value.

2.2 Product Performance Analysis

- The system shall show top-performing products based on revenue and quantity sold.
- The system shall show least-performing products based on sales data.
- The system shall allow comparison between different product categories.

2.3 Time-Based Analysis

- The system shall support daily, monthly, quarterly, and yearly sales views.
- The system shall allow comparison between selected time periods.

2.4 Customer Analysis

- The system shall categorize customers based on buying patterns.

- The system shall display which customer segments are buying which products.

2.5 Filtering & Interaction

- The system shall allow users to filter data by product type, region, and time period.
- The system shall allow dynamic updates of dashboard visuals based on selected filters.

3. Data Logic & Calculations

This section defines how key metrics will be calculated in the system.

- **Total Sales Quantity** = Sum of all units sold per product.
- **Total Revenue** = Sum of (Selling Price × Quantity Sold).
- **Total Cost** = Sum of (Making cost × Quantity Sold)
- **Total Profit** = Total Revenue – Total Cost.
- **Return Quantity** = Sum of all returned product units.
- **Return Loss** = Sum of (Returned Quantity × Selling Price or Cost Impact).
- **Top Performing Product** = Product with highest revenue and/or highest sales quantity.
- **Least Performing Product** = Product with lowest sales quantity.
- **Period Comparison** = Comparison of sales data across selected time ranges (daily, monthly, quarterly, yearly).

4. Dashboard Behavior

- The dashboard shall refresh data based on a scheduled interval (e.g., daily/weekly).
- The dashboard shall update visuals dynamically when filters are applied.
- The dashboard shall maintain consistency of data across all charts and KPIs.

- The dashboard shall ensure role-based visibility (e.g., managers see only their region's data).
- The dashboard shall handle missing or incomplete data by displaying appropriate defaults or null indicators.
